

De-Militarize U.N.M.

Did you know our school is a leader in the global arms race?

1) In the basement of Electrical and Computer Engineering Dr. Edi Schamlogu (277-4423, edi@eece.unm.edu) just helped create a whole new category of terror weapons called E-Bombs (IEEE Spectrum, November 2003).

The Dawn of The E-BOMB

Nuclear powered space laser weapon from U.S. Space Command's Vision 2020

- 2) At UNM's Institute for Space Nuclear Power, in the Chemical and Nuclear Engineering Department, Dr. Mohamed El-Genk (277-5442, mgenk@unm.edu) has been working for over a decade to create a nuclear power supply for space laser weapons (Daily Lobo, Feb. 2003).
- 3) At least 53 UNM researchers have security clearances for secret weapons projects.
- 4) UNM President Louis Caldera (277-2626, lcaldera@unm.edu) says jobs, stability and security will trickle down from war research.

In reality this UNM research is about helping the U.S. empire class achieve global domination. Corporations like Lockheed-Martin and Boeing will profit as public universities use sweatshop labor to solve hi-tech weapons problems. We working people will suffer the instability of war as countries seeking self-determination fight-back against our military-industrial complex. World peace starts with disarming UNM!

Attend the Regents meeting Tuesday, Dec. 9, 1 pm, SUB Ballroom
